Elena Costa

Computer Science Student | Web Development Internship

Lisbon, Portugal · elena@example.org
Website: elena-costa.self.cv/

PROFESSIONAL PROFILE

I build small web tools that make student activities easier to use. My projects combine responsive HTML and CSS with JavaScript forms, clear field labels, and practical usability testing. I am looking for a web development internship where I can contribute to useful products and develop my frontend skills.

PROJECTS

Campus Event Registration

Student project — Sep 2026 – Oct 2026

- Developed a responsive registration form in a team of three student volunteers. I owned the frontend and form validation; my teammates prepared the event information and coordinated sessions.
- Moved the event date and session choices above the introduction, added visible field labels, and wrote validation messages explaining how to correct missing answers.
- Tested the registration task before and after the changes. Successful completions increased from four of eight attempts to seven of eight. Identified testing on more mobile devices as the next improvement.

Tools & technologies: HTML, CSS, JavaScript

Student Reading-List Finder

Personal project — May 2026 – Jun 2026

- Built a JavaScript search interface for a sample university reading list. Added subject filters and keyboard navigation so students could find books without scrolling through the entire list.

Tools & technologies: JavaScript, HTML, CSS

SKILLS

Technical: HTML, CSS, JavaScript, responsive layouts, form validation, keyboard navigation, usability testing
Tools: Git, Figma

EDUCATION

BSc · Computer Science

University of Lisbon · Portugal — Sep 2024 – Present

- Relevant coursework: web development, software engineering, and human-computer interaction.
